Subject: Narkomed MRI with Improved VPO Monitor

Orders are now being accepted for the Narkomed MRI anesthesia machine with the improved VPO monitor. Production engineering is incorporating this change into all current orders. Units are expected to begin shipping **November 22, 2000.**

The improved MRI VPO monitor is similar in appearance and operation to the Narkomed GS monitor, and all alarms and functions are identical. The Narkomed MRI environment predicates the need for a different display material in screen construction. This results in enlarged numerical fonts and a thickened waveform on the monitor display, thereby improving its readability.

The Narkomed MRI anesthesia machine has had many internal modifications and utilizes the smaller, powerful Jerome power supply.

The inclusion of an ultrasonic flow sensor, designed for use in the MRI environment, increases the tidal volume range to 20-1500 ml and increases the accuracy of the monitor reading.

There is no price increase for the Narkomed MRI machine for the rest of 2000. The list price will increase to $54,725 after February 15, 2001.

An upgrade kit is available. The kit provides all the parts necessary to attach the new monitor and convert to an ultrasonic flow sensor system. The price and part number for the kit are covered in Product Bulletin # 111, Improved MRI VPO Monitor Upgrade Kit.

If you have any questions or require further information, please contact your Product Manager, Greg Sutherland, at extension 2311.
